Education

NIIS Institute of Business Administration (IBA), Bhubaneswar **August 2024 – Present**
Bachelor of Computer Applications (BCA)

Experience

BharatCares **6 Weeks**
Data Analytics Intern – AICTE / IBM SkillsBuild Program

- Worked on a supermarket sales analysis project as part of the AICTE–IBM SkillsBuild Data Analytics with AI program in partnership with BharatCares.
- Used Python, Pandas, and NumPy to analyze 500 transaction records across branches, product categories, customer segments, and payment methods.
- Created visualizations using Matplotlib and Seaborn and prepared an Excel summary report with business insights and recommendations.

Projects

Supermarket Sales Analysis – Data Analytics **GitHub**

- Developed a Python-based exploratory data analysis project using 500 supermarket transaction records to evaluate retail sales performance.
- Analyzed sales across product lines, branches, customer types, and payment methods to identify trends and patterns.
- Created visualizations and an Excel summary report with business insights and recommendations.

CYBERGUARD – AI-Powered Threat Detection Platform **Live**

- Developed an AI-assisted threat detection platform that analyzes suspicious messages, URLs, and email content using rule-based checks, machine learning, and LLM-assisted explanations.
- Configured a locally hosted LLM as the primary analysis engine, with the Groq API as a fallback for AI-powered threat analysis and explanations.
- Designed a risk-scoring dashboard with explainable indicators, risk classifications, and actionable recommendations.

SocietySync – Residential Society Management Platform **Live**

- Built and deployed a residential management platform with role-based dashboards for administrators, employees, and residents.
- Implemented community chat, visitor gate passes, maintenance billing, complaint tracking, resident onboarding, and employee management workflows.
- Integrated Supabase for database operations, authentication, and role-based access control; deployed the application on Vercel.

Technical Skills

Programming: Python, JavaScript, TypeScript, Java, C, C++
Data and AI: Pandas, NumPy, Matplotlib, Seaborn, LLM Integration, Groq API
Development: React.js, Node.js, REST APIs, Authentication
Databases and Tools: SQL, PostgreSQL, Supabase, Git, GitHub, Linux, Vercel

Strengths

Independent Project Development

- Build and deploy practical software projects, taking ideas from initial planning to working applications.

Practical Problem-Solving

- Break down technical requirements into manageable tasks and implement solutions through hands-on experimentation.

Adaptability and Continuous Learning

- Explore and apply technologies such as Python, AI/LLM integration, databases, and development tools through practical projects.
